Type less. glyf more.

The AI keyboard that does the rest.

iPhone and Android · tryglyf.com

The problem

Your keyboard only types.

Everything else is a trip out of the chat and back.

Share a café — 5 steps

Open Maps › Search › Copy link › Back to chat › Paste

Send your address — 5 steps

Open Notes › Find it › Copy › Back to chat › Paste

Sound professional — 6 steps

Copy draft › Open ChatGPT › Prompt › Copy › Back › Paste

Pay a friend in USDC — 6 steps

Copy address › Open wallet › Paste › Amount › Confirm › Back to chat

Book a meeting — 6 steps

Open Calendar › Find a slot › Create event › Copy invite › Back to chat › Paste

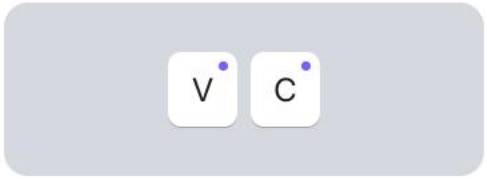

Glyf

It gets done where you type.

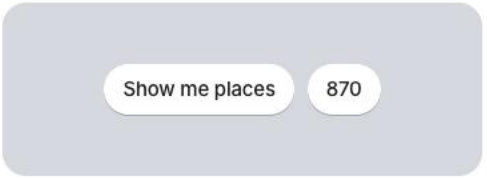

Hold space

AI works on what you typed: rewrites it, answers it, finds the place.

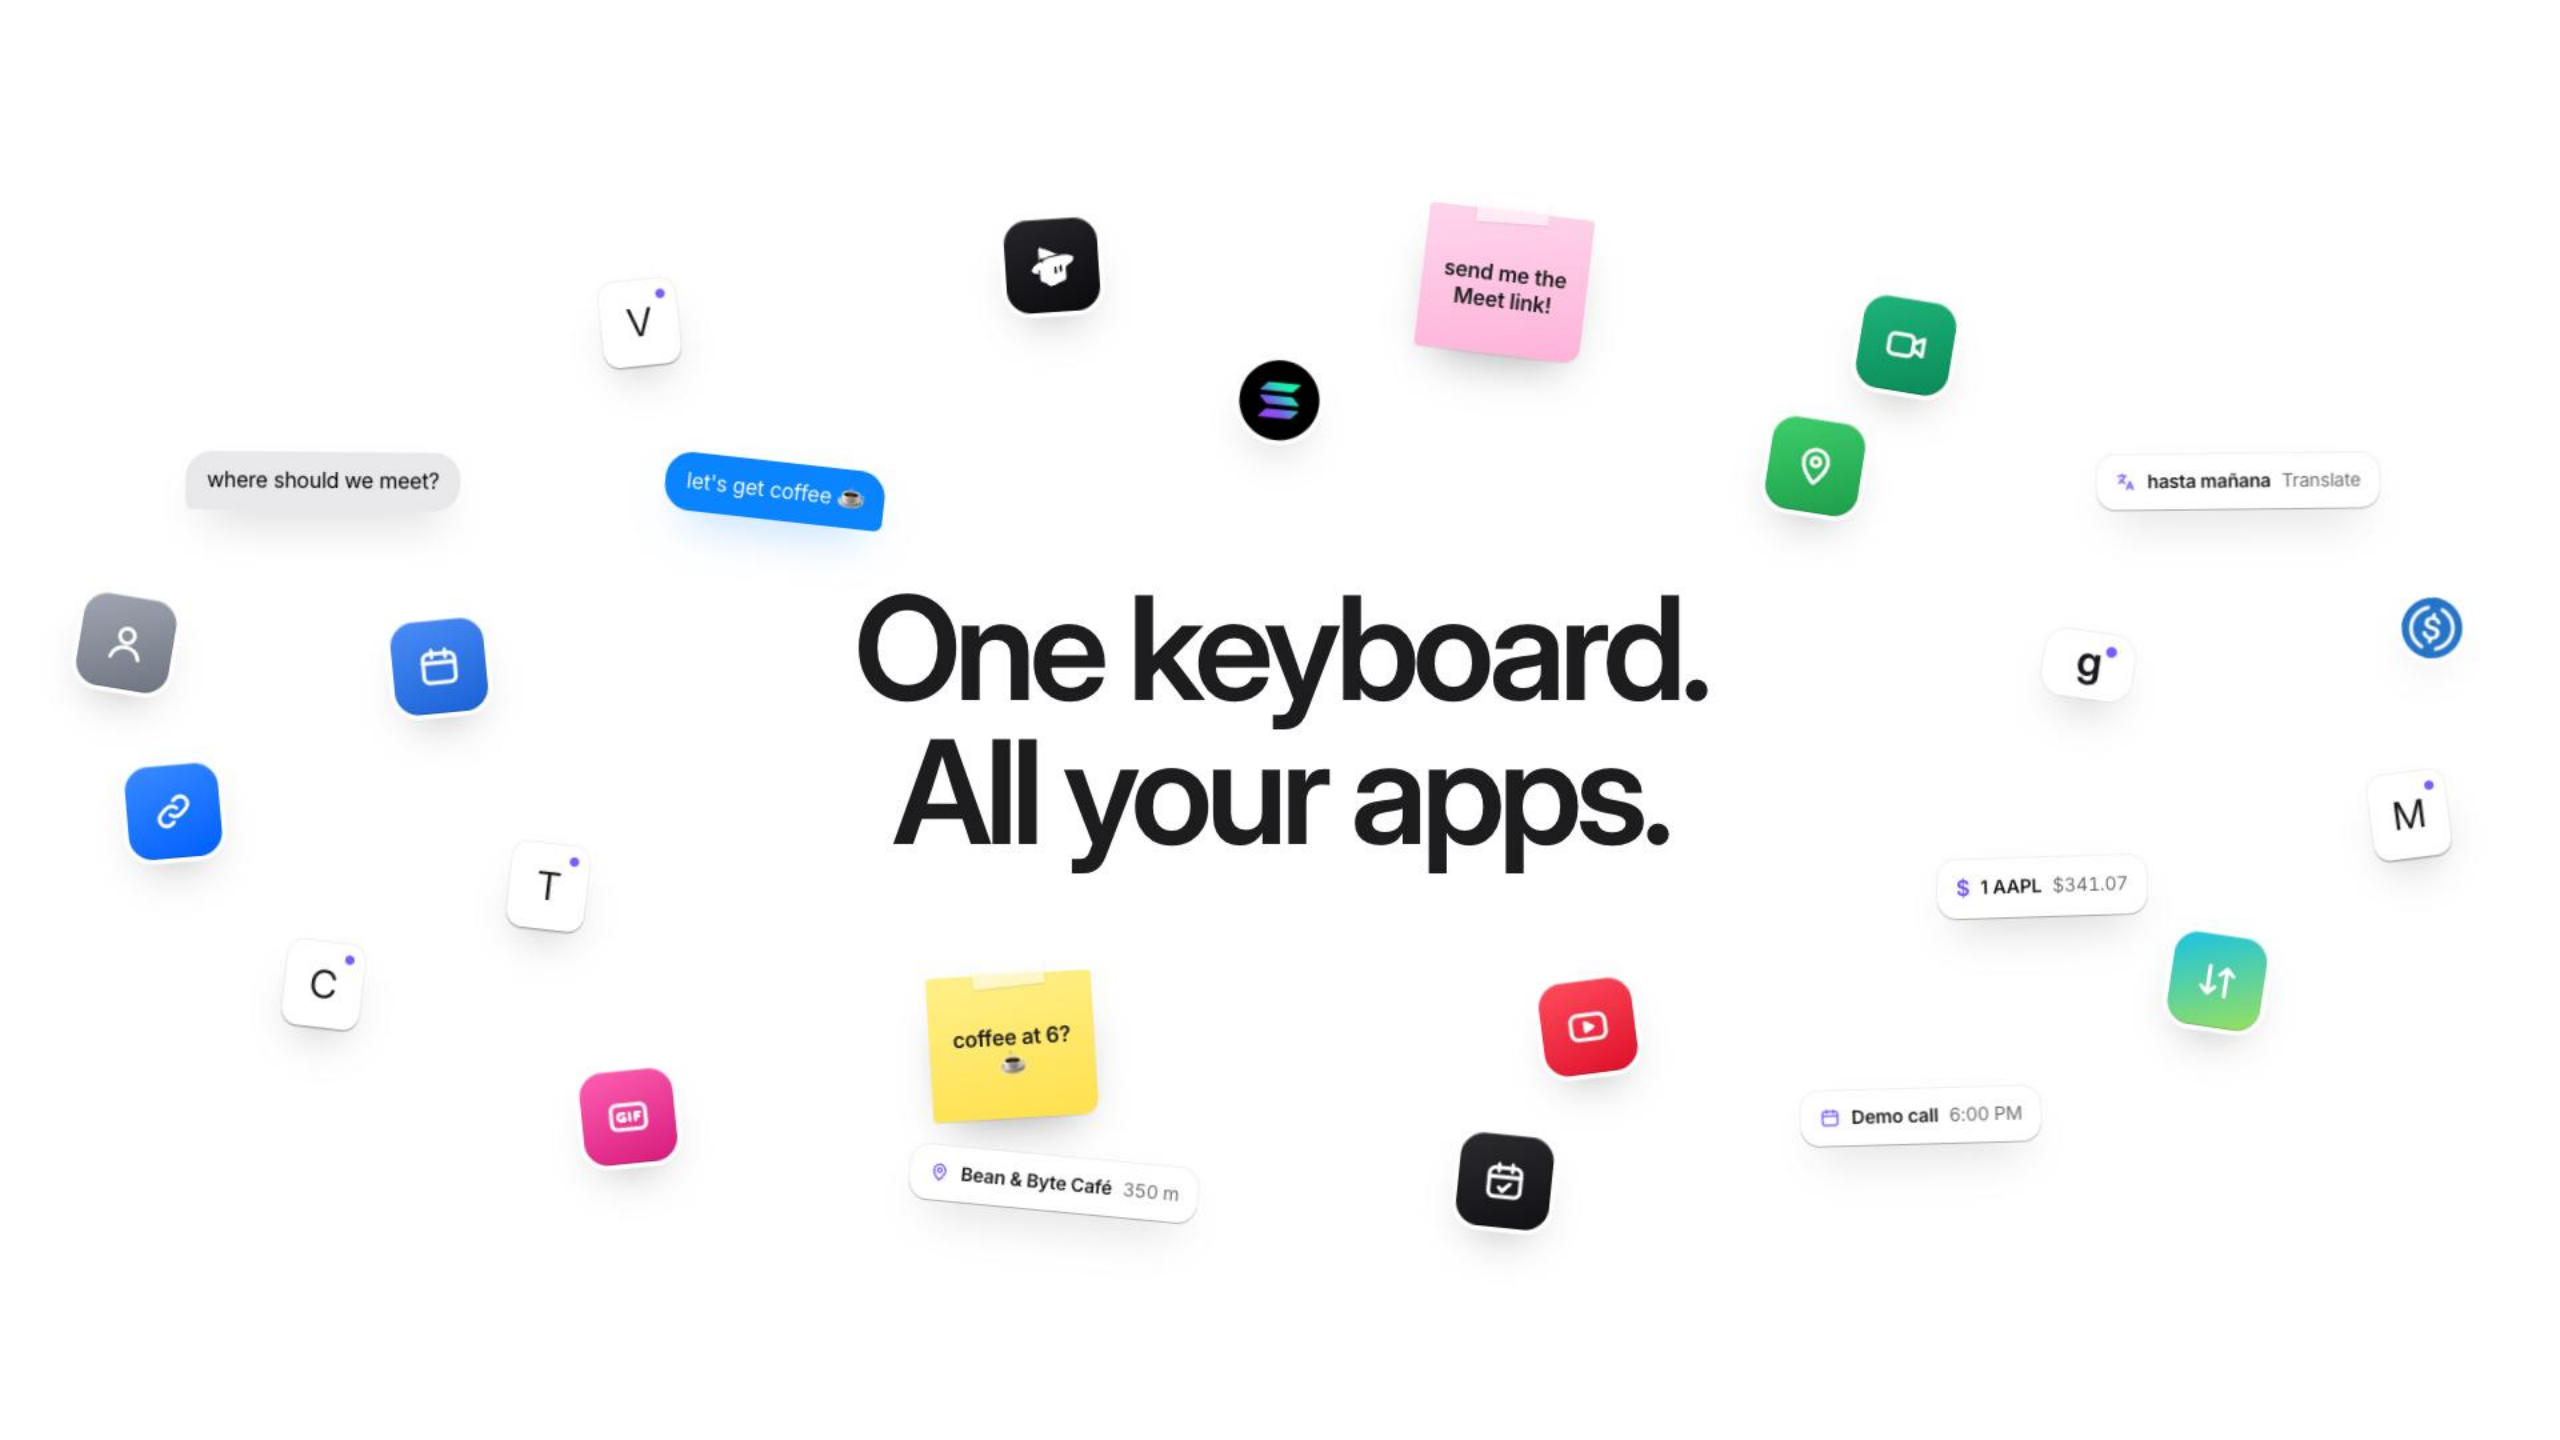

Hold a letter

V shares your details and C opens the calendar. Every other letter is yours to bind.

Tap the strip

It reads what you are typing and offers the one move that finishes it.

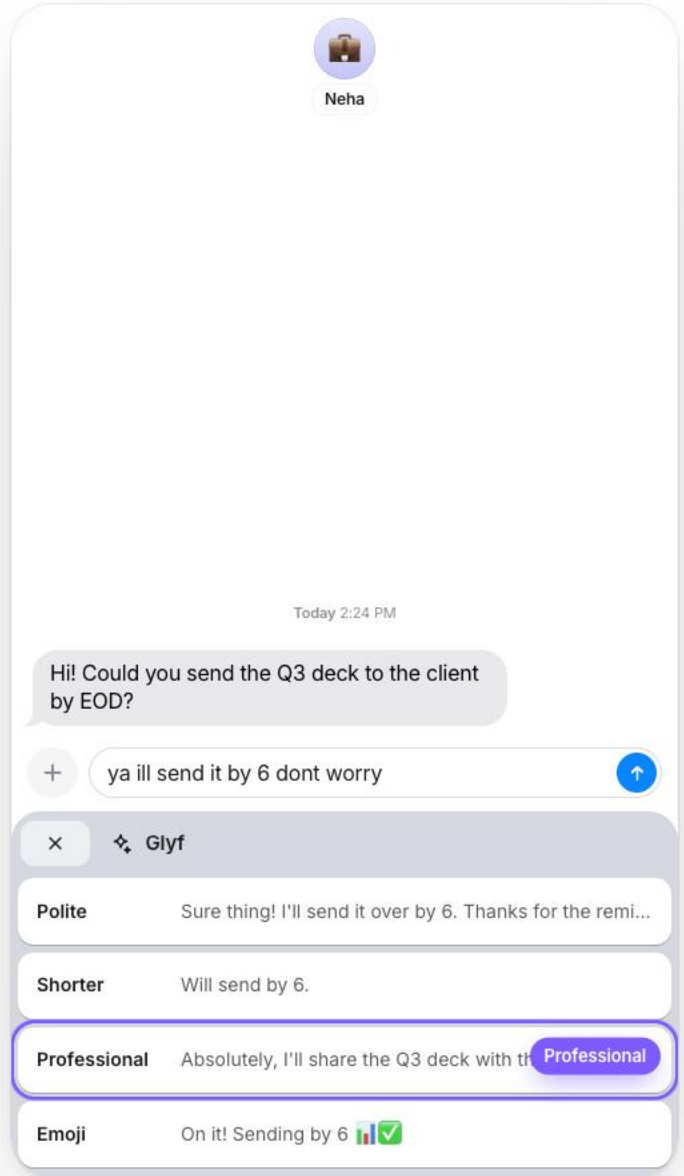

One keyboard. All your apps.

AI rewrite

Type it messy. Send it polished.

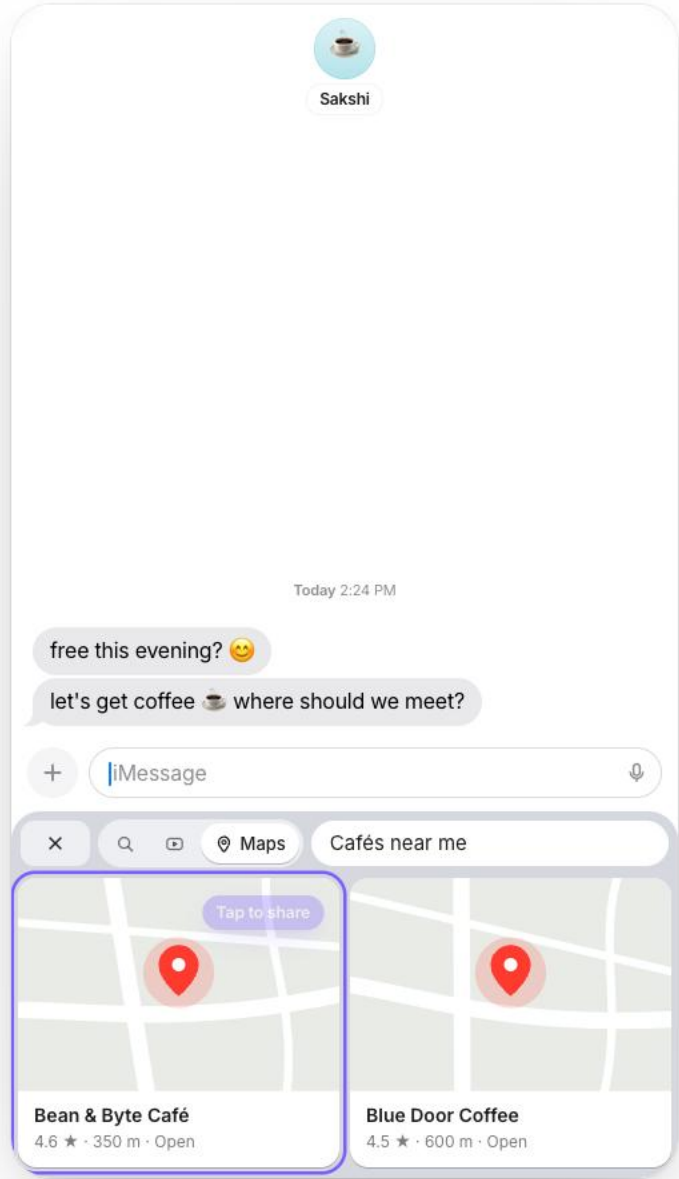

- Hold space on a messy draft
- Pick a tone: Polite, Shorter, Professional, Emoji
- The rewrite streams straight into the field

Search inside the keyboard

Where to meet? Maps, mid-chat.

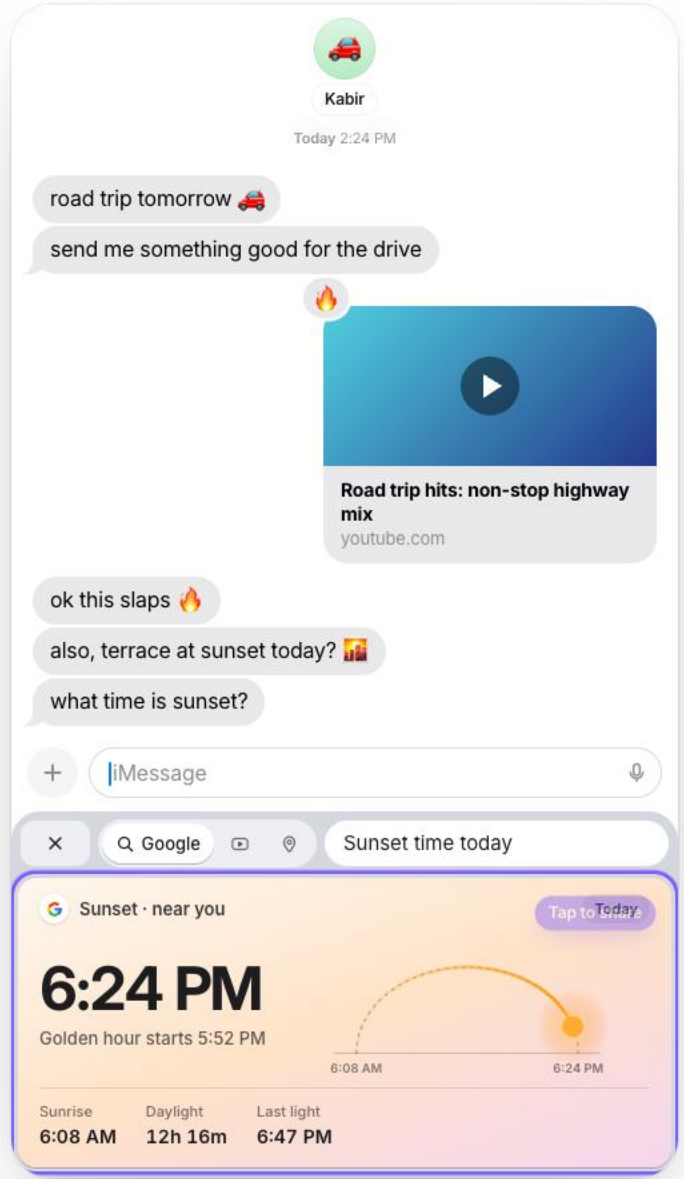

- Google, YouTube and Maps without leaving the chat
- Results drop in as rich cards, not bare links
- Hold space on a sentence and Glyf picks the search

Answers and videos

Send the song, not the search.

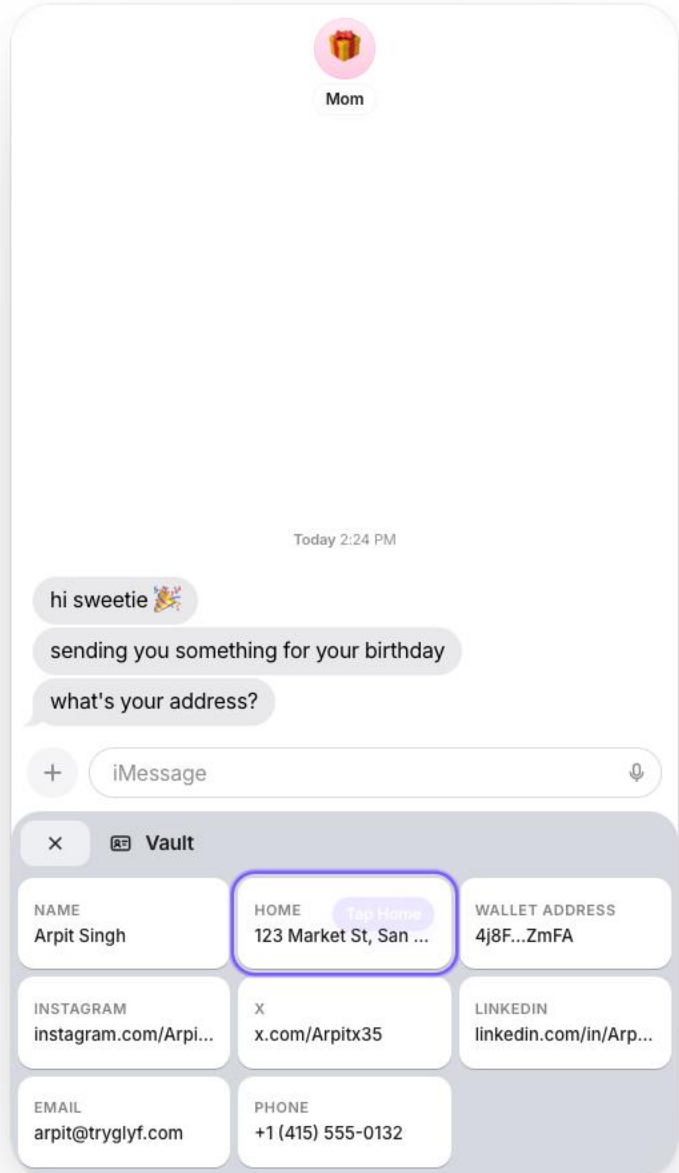

- Send the video itself, not a search screenshot
- Answers come back as cards: sunset at 6:24
- Live facts only from real providers, never made up

Knows you

Never type your address again.

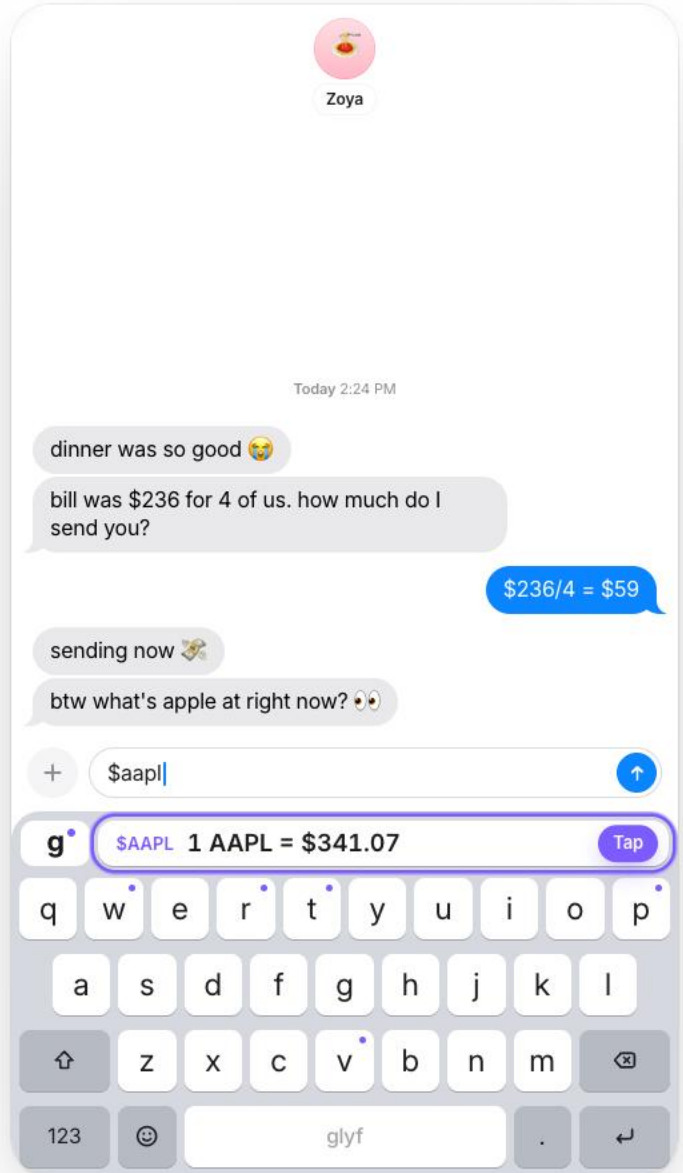

- Address, wallet address, socials: saved once
- Encrypted on the device, shared with the model only when you allow it
- Hold V, or tap the strip when a chat asks for it

Smart strip

Do the math. Check the price.

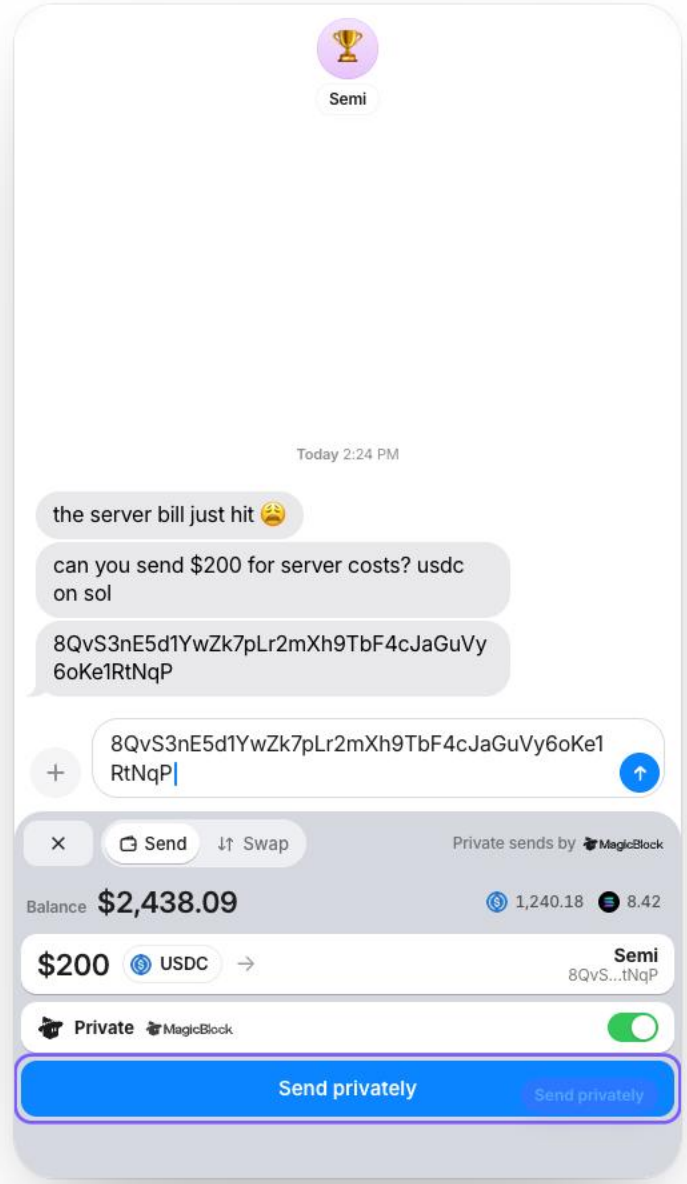

- Type a sum, tap the answer
- Type a ticker, tap the price
- Two asks, two taps, zero app switches

Payments

Pay on Solana. Privately.

- Paste an address and the strip offers Pay
- Signed by your own wallet: Phantom. Glyf never holds a key
- Private transfers through MagicBlock, settled on Solana
- Token prices in the strip, in dollars

Skills

Bind anything to any key.

- Describe a skill in plain English, get a runnable action
- Multiple steps, conditions and real tools
- It lands on a key, yours to keep. Sharing and a creator hub come later

Describe it

When I hold M, tell them what is next on my calendar. If nothing is left today, say I am free.

1 `calendar.today` Read today's events

2 `if events` Insert the next one

↳ `else` "I'm free, call anytime"

Bound to M

Connectors and tools

Your apps, one key away.

Nine apps sign in. Google and Notion run actions today.

Google **Notion** **Slack** **GitHub** **Linear** **Todoist** **Calendly** **Zoom** **Spotify**

Weather · Crypto prices · Currency · Stocks · Wikipedia · Dictionary · Synonyms · Air quality · Places · Routes and ETA

Holidays · Books · Tech news · Sports · Recipes · Countries · Food facts · GitHub repos · Quotes · Jokes · and more

28 of the 30 built-in tools need no API key at all.

- Dictation
- Clipboard history
- Emoji
- Notes
- Key themes
- Light and dark

Trust

A keyboard sees everything. So we built it tight.

The keyboard never signs

Payments hand off to your own wallet. Phantom signs, and no key ever touches Glyf

Your details stay encrypted

AES-GCM, in the Keychain and the Android Keystore. Sent to the model only when you allow it

Silent in password fields

No AI, no suggestions, no clipboard capture

It learns how you type

Your names, slang and shorthand stop getting corrected, and 20 vocabulary packs cover the rest

Why now

The keyboard is the next interface.

It is the one app open inside every other app.

Models are fast enough

Small models answer in well under a second, cheap enough to run on a keystroke

The habit already exists

People copy a message into a chatbot, fix it, and paste it back. The behaviour is set, the place is wrong

Money moves like messages

Stablecoins on Solana make paying a friend as quick as texting them

Business model

Free to type.
Pay to do more.

Free

$0

10 AI actions a day

Plus

$2/mo

100 AI actions a day

Max

$5/mo

500 AI actions a day

Later: fees on swaps and payments, and a creator marketplace for skills.
