glyf

Type less. glyf more.

The AI keyboard that does the rest.

iPhone and Android · tryglyf.com

The problem

Your keyboard only types.

Everything else is a trip out of the chat and back.

Share a café — 5 steps

Open Maps › Search › Copy link › Back to chat › Paste

Send your address — 5 steps

Open Notes › Find it › Copy › Back to chat › Paste

Sound professional — 6 steps

Copy draft › Open ChatGPT › Prompt › Copy › Back › Paste

Pay a friend in USDC — 6 steps

Copy address › Open wallet › Paste › Amount › Confirm › Back to chat

Glyf

It gets done where you type.

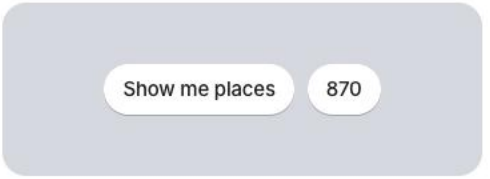

Hold space

AI works on what you typed: rewrites it, answers it, finds the place.

Hold a letter

Fires the skill bound to it. Your address, a translation, the weather.

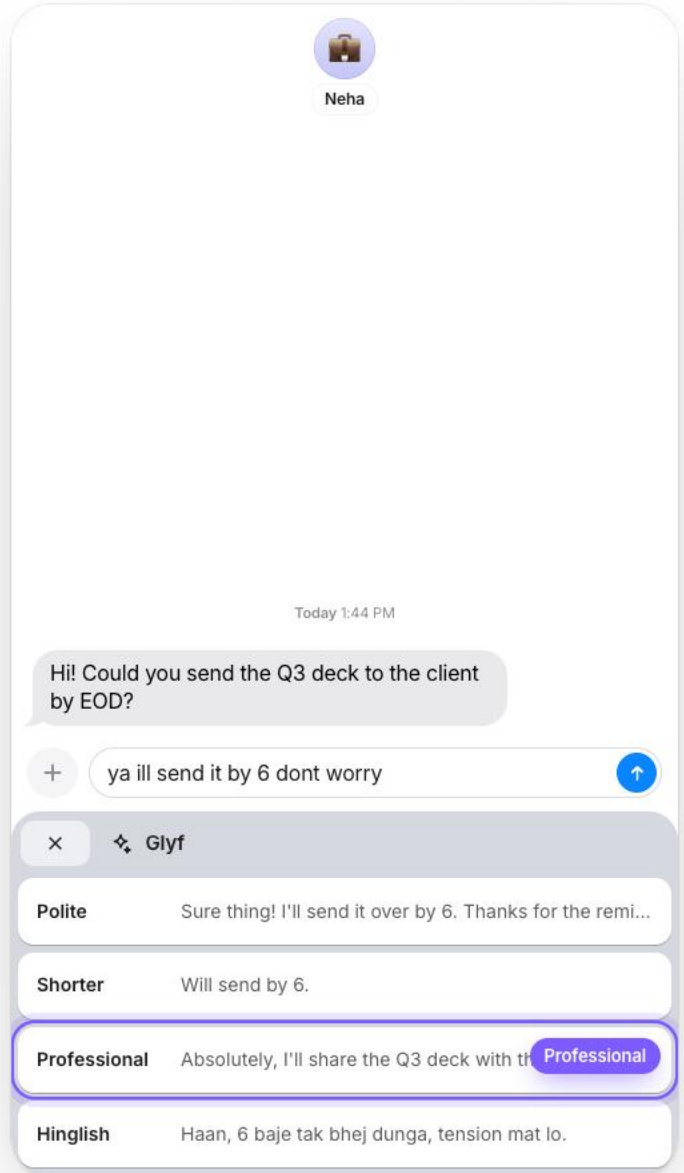

Tap the strip

It reads what you are typing and offers the one move that finishes it.

AI rewrite

Type it messy. Send it polished.

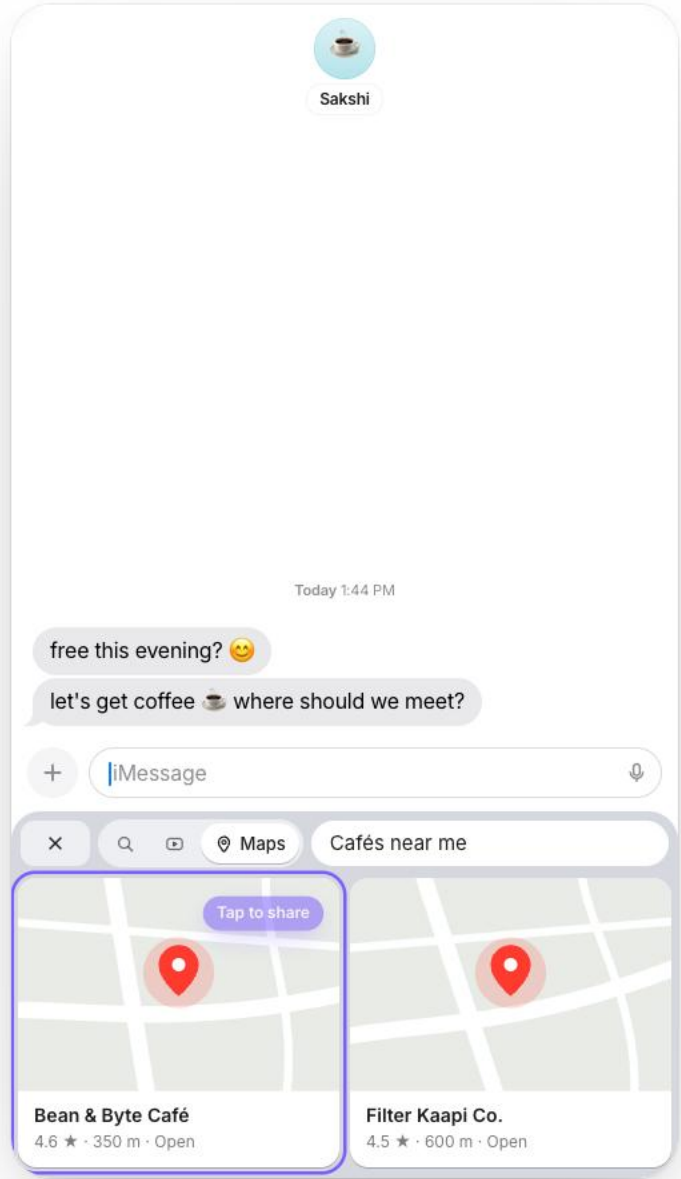

- Hold space on a messy draft
- Pick a tone: Polite, Shorter, Professional, Hinglish, Emoji
- The rewrite streams straight into the field

Search inside the keyboard

Where to meet? Maps, mid-chat.

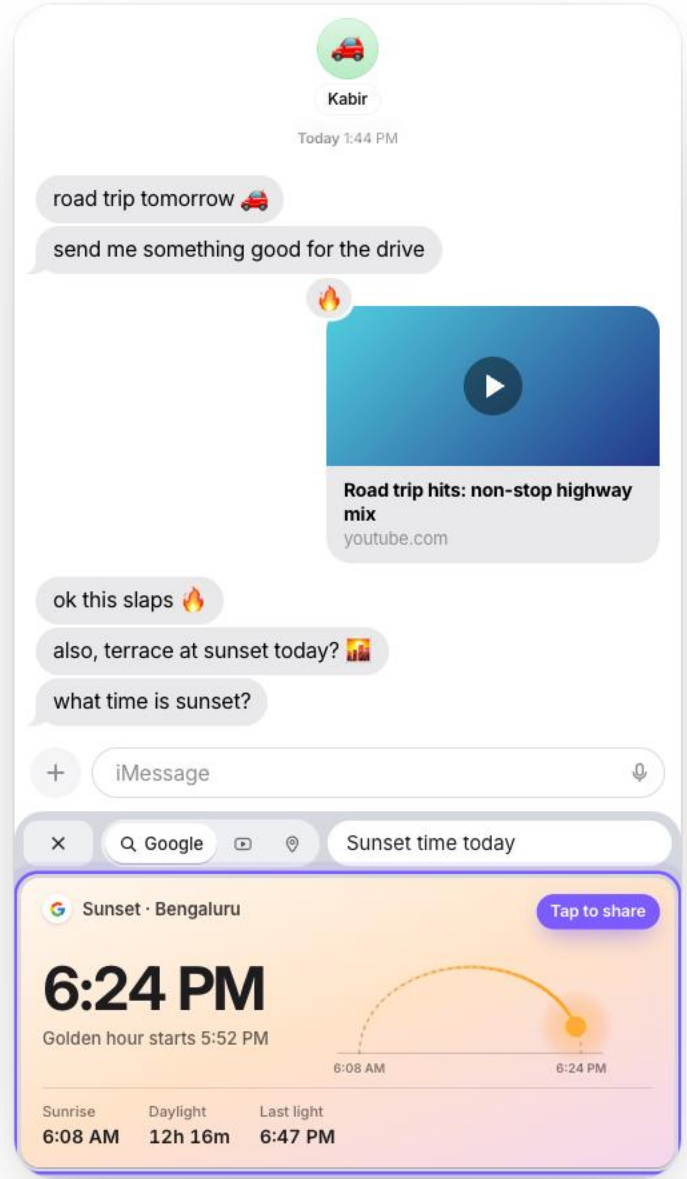

- Google, YouTube and Maps without leaving the chat
- Results drop in as rich cards, not bare links
- Hold space on a sentence and Glyf picks the search

Answers and videos

Send the song, not the search.

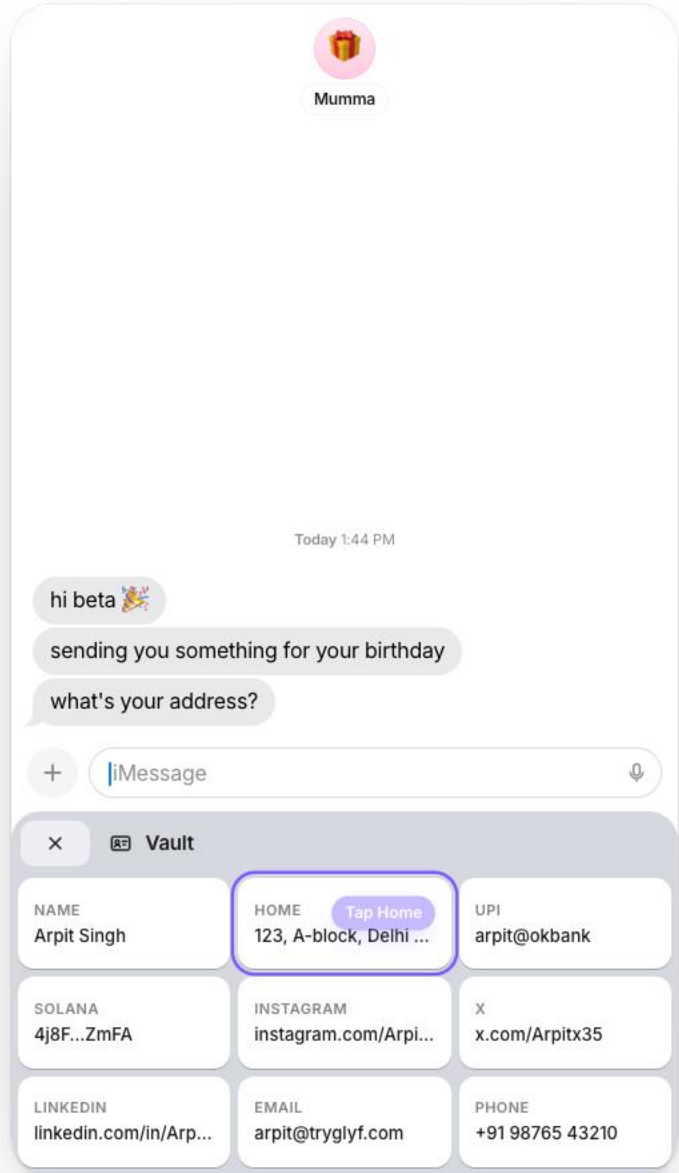

- Send the video itself, not a search screenshot
- Answers come back as cards: sunset at 6:24
- Live facts only from real providers, never made up

Knows you

Never type your address again.

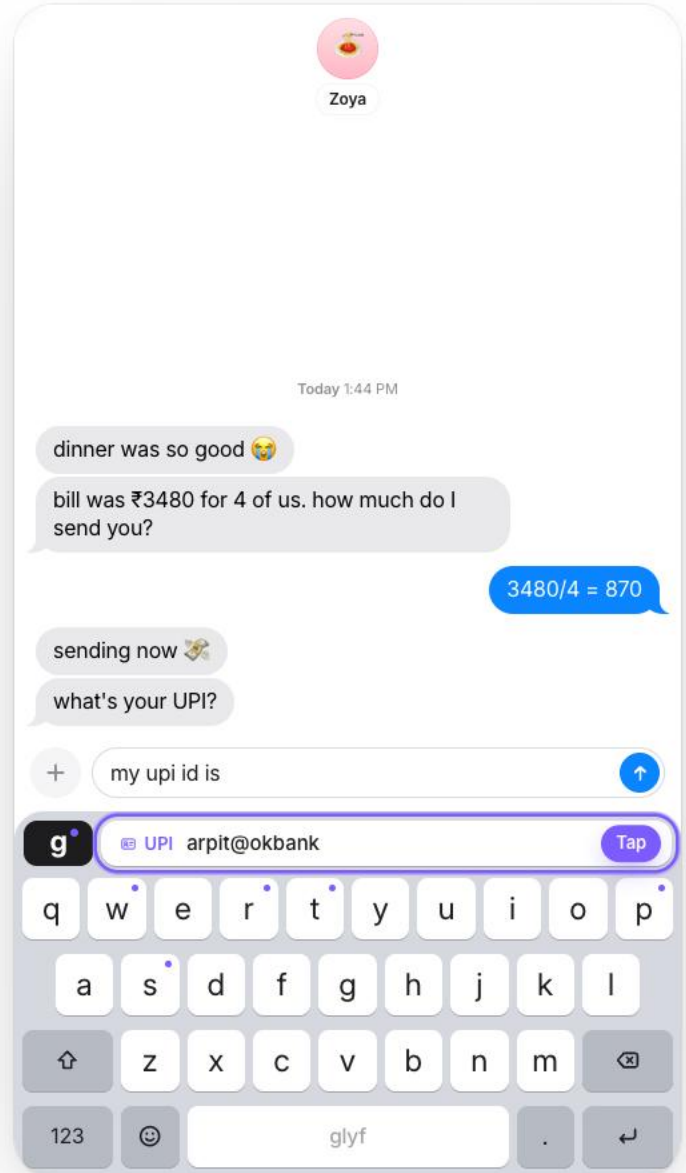

- Address, UPI, wallet, socials: saved once
- Encrypted on the device, never on our servers
- Hold S, or tap the strip when a chat asks for it

Smart strip

Do the math. Get paid.

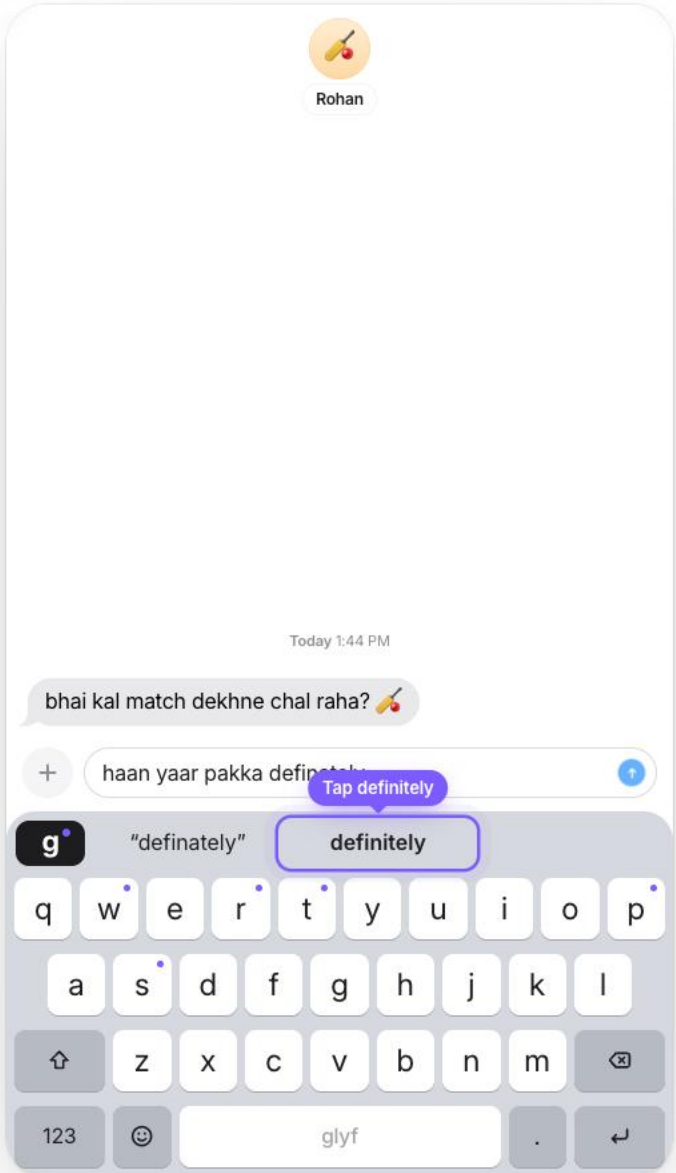

- Type a sum, tap the answer
- Talk about paying and your UPI is one tap away
- Two asks, two taps, zero app switches

Typing engine

Fixes the typos. Keeps the yaar.

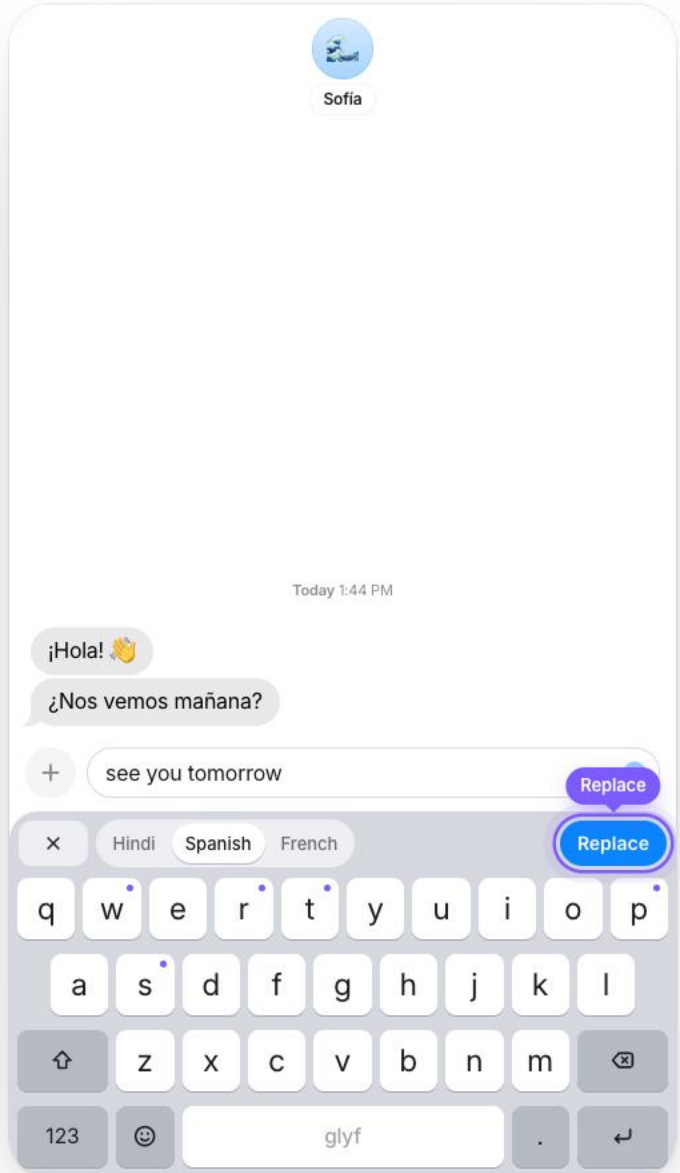

- On-device autocorrect and prediction
- Understands Hinglish, learns your words
- 20 vocabulary packs, no AI call needed

Translate

Reply in Spanish. No lessons.

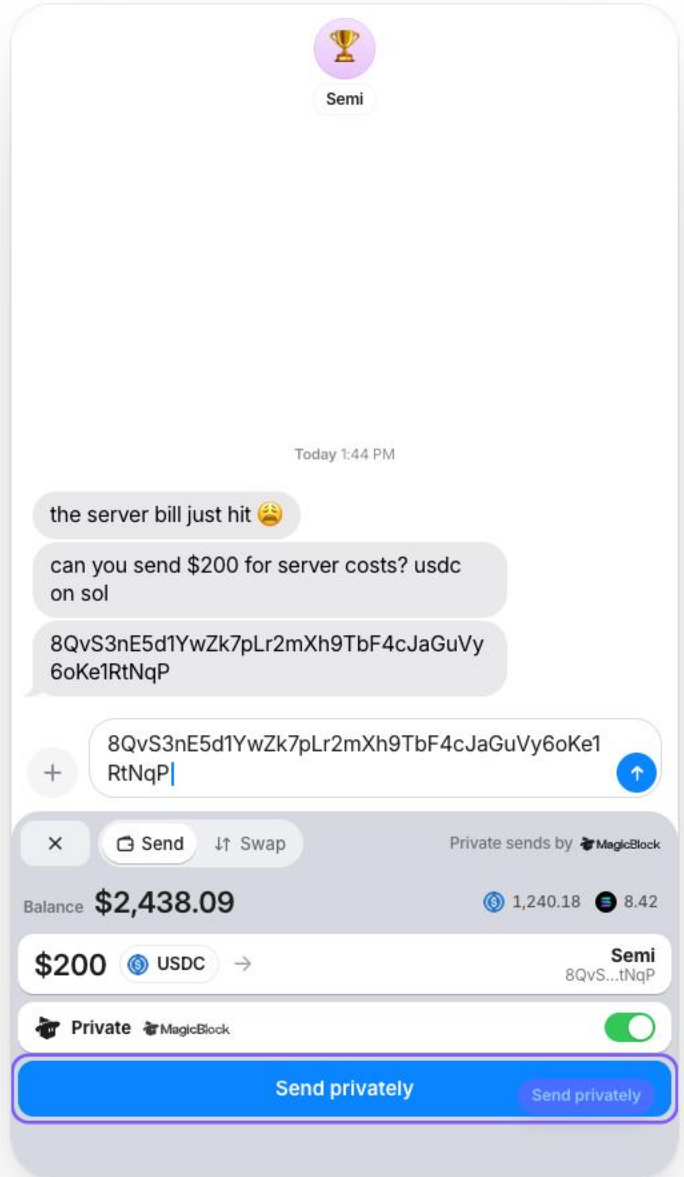

- Hold T and type in your own language
- The translation follows as you type
- Replace with one tap

Payments

Pay on Solana. Privately.

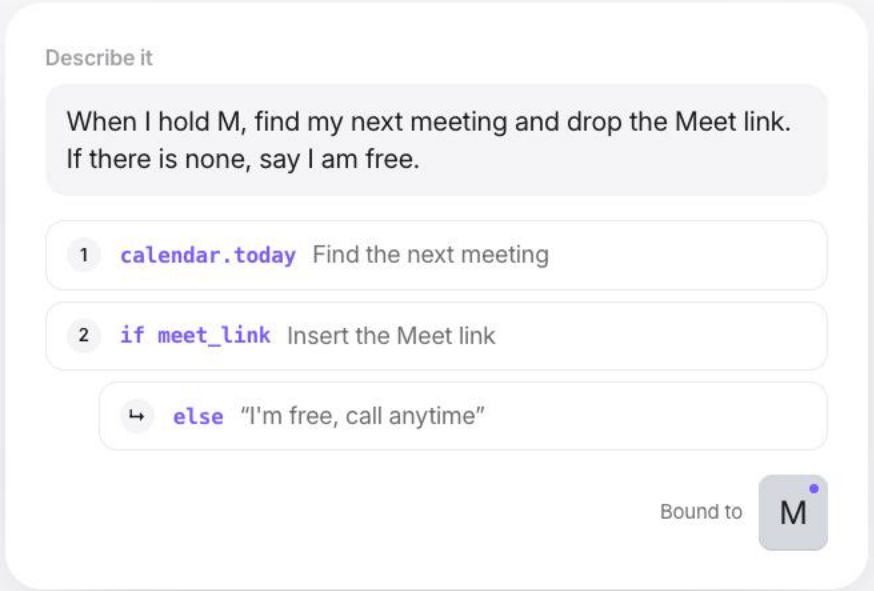

- Paste an address and the strip offers Pay
- Signed in the app with a Privy wallet. The keyboard never holds a key
- Private transfers through MagicBlock, settled on Solana

Skills

Bind anything to any key.

- Describe a skill in plain English, get a runnable action
- Multiple steps, conditions and real tools
- Share on the Skills hub or install packs: Writer, Operator, Social, Desi

Connectors and tools

Your apps, one key away.

Nine apps sign in. Google and Notion run actions today.

Google **Notion** **Slack** **GitHub** **Linear** **Todoist** **Calendly** **Zoom** **Spotify**

Weather · Crypto prices · Currency · Stocks · Wikipedia · Dictionary · Synonyms · Air quality · Places · Routes and ETA

Holidays · Books · Tech news · Sports · Recipes · Countries · Food facts · GitHub repos · Quotes · Jokes · and more

28 of the 30 built-in tools need no API key at all.

- Dictation
- Clipboard history
- Emoji
- Notes
- Key themes
- Light and dark

Trust

A keyboard sees everything. So we built it tight.

The keyboard never signs

Payments hand off to the app, where Privy holds the wallet. No key touches the keyboard

Your details stay encrypted

AES-GCM, in the Keychain and the Android Keystore. Sent to the model only when you allow it

It refuses secrets

Card numbers, seed phrases, API keys, OTPs and IDs are rejected, never stored

Silent in password fields

No AI, no suggestions, no clipboard capture

Typing needs no network

Autocorrect, prediction and 20 vocabulary packs run on the device

No API keys in the app

Model keys and OAuth tokens stay on the server

Where it stands

It already runs on both phones.

iOS

App and keyboard on iPhone, on TestFlight

Android

Keyboard and app on device

336

Tests across the backend, iOS and Android

30

Tools and 9 connectors wired to the keys

Next: the backend on api.tryglyf.com, then the stores.

Why now

The keyboard is the next interface.

It is the one app open inside every other app.

Models are fast enough

Small models answer in well under a second, cheap enough to run on a keystroke

The category is funded

Acti raised a $5.3M seed led by BITKRAFT in June 2026 for an AI keyboard

Money moves like messages

Stablecoins on Solana make paying a friend as quick as texting them

Business model

Free to type.
Pay to do more.

Free

$0

40 AI actions a day

Plus

$4.99/mo

400 AI actions a day

Max

$19.99/mo

Unlimited

Later: fees on swaps and payments, and a creator marketplace for skills.

Roadmap

What ships next.

Now

- Backend live at api.tryglyf.com
- Public TestFlight beta
- Waitlist to first users

Next

- App Store and Google Play launch
- Plus and Max subscriptions
- Skills hub with creators

Later

- Wallet release: private payments and swaps
- Per-contact memory and tone
- More languages
